the third number must be 9 ( $5 + 4$ ) because  $6 + 5$  and  $6 + 4$  are both too big. The fourth number in the 4-figure number cannot be 5 as  $5 \times 3 = 15$  (repeat digit 5). The fourth number also cannot be 6 as then we would get 8 twice, so it must be 4.

### *All the Digits - maths*

To convert the digits to numbers, we need to multiply with the digit with the place value of the digit. For example, the value of the number formed by the digit 4 in the ten's place and the digit 3 in the one's place is  $4 \times 10 + 3 \times 1$ . This type of digit problems is shown in the following example.

### *Digit Word Problems (solutions, videos, examples)*

Sentence: The sum of the digits in the number is 8.  $x + 3x = 8$ . Step 2: Solve the equation.  $x + 3x = 8$ . Isolate variable  $x$ .  $4x = 8$   $x = 2$ . The one's digit is 2. The ten's digit is  $3 \times 2 = 6$ . Answer: The number is 62.

### *Multiplication Word Problems Worksheets*

Using the counting principle, the number of 2 digit numbers that we can make using 4 digits is given by  $4 \times 3 = 12$  The above problem is that of arranging 2 digits out of 4 in a specific order. This is also called permutating. The most important idea in permutations is that order is important. When you use the digits 3 and 4 to make a number, the number 34 and 43 are different hence the order of the digits 3 and 4 is important.
