Using a BBU 12G940 casting is an option - but not terribly practical (see 'Engine - 998 tuning, fitting a 1275 head'). The much coveted 12G295/12G206 heads are all-but non-existent realistically now. There are some about - most have been well used and abused, many cracked or modified into uselessness, with just a few, rare, un-molested examples of the species.

~~Engine - 998 tuning, further options - Calver ST~~

How to Power Tune the 998cc A-series Engine is packed with hints and tips for making this little BMC/BL/Rover lump a bit more potent. Written by engineer and professional race engine builder Des Hammill, it includes expert building tips and techniques. Priced at £14.99, it promises to help save you money by showing you what parts and upgrades really make a difference - rather than spending your hard-earned cash on modifications that may not deliver.

Engine - 998 tuning, bolt-ons (stage one) Keith Calver.
20/08/2005 12:25:00. The 998cc engine is a very robust and
tunable unit. It is also the most common engine found in
standard Minis. Despite the lure of the much-advertised
1380cc alternatives, many simply want to get a little more
from what they have at reasonable outlay.

~~Mini Spares Article Engine 998 tuning, bolt-ons (stage ...~~
I currently have a 998 A series with a Stage 1 kit (Part No: C-
STN17), I'm looking to move to the next stage to get a bit
more performance. I was thinking either Rockers(Part No: C-
AHT440) and/or an upgraded Head. However I'm not sure
where to start. My 998 is in great shape, so right now an
engine swap is not in the picture, nor the funds.

~~Classic Mini Engine Performance Enhancement - A DIY Guide~~
The 998 is quite tuneable for quite good money. You don't
even have to mess about with changing cranks really. For
good useable power a 998 is great, it'll take the revs and a
lot of abuse on the road (mine does) It'll keep up and even
embarrass a lot of the 1275 (and bigger) engines.

Calver Special Tuning is a specialist in the classic A-series engine, mainly for Minis but also for all in-line applications such as Midget, Sprite, A30, A40 etc.

~~Calver Special Tuning, based in Malton, North Yorkshire, Austin Motor Company's small straight-4 automobile engine, the A series, is one of the most common in the world [citation needed]. Launched in 1951 with the Austin A30, production lasted until 2000 in the Mini. It used a cast-iron block and cylinder head, and a steel crankshaft with 3 main bearings. The camshaft ran in the cylinder block, driven by a single-row chain for most applications, and ...~~

~~Classic Mini DIY - 998 Engine Rebuild Series - YouTube~~

The 998 in low compression guise (8.9:1) gave an OE recorded out-put at the crankshaft of 38bhp @ 5250rpm, and 52lb ft torque at 2700rpm. By comparison the 1098 gave 45bhp @ 5250rpm and 56lb ft @ 2,700rpm. That's 26.5% more than the 998 AND it had an even lower compression ratio of a measly 8.3:1!
