Muscular System Answers  
**Anatomy And  
Physiology The  
Muscular System  
Answers**

Right here, we have countless book **anatomy and physiology the muscular system answers** and collections to check out. We additionally manage to pay for variant types and also type of the books to browse. The enjoyable book, fiction, history, novel, scientific research, as skillfully as various other sorts of books are readily genial here.

As this anatomy and

System | Anatomy and  
Physiology I

Summary of Muscular system  
anatomy and physiology The  
main types of muscle tissue  
are: skeletal, cardiac and  
smooth muscles. Skeletal  
muscles can be moved  
voluntarily and are  
important for maintaining  
body temperature, by  
generating heat. The cardiac  
muscle is present only in  
the heart and can contract  
without neural stimulation.

physiology: Video | Osmosis

As a body system, the muscular system serves different important functions for man's survival. Through the skeletal muscles, this system maintains the posture of an individual, as well as initiate, continue and stop body movement. With the smooth muscles, digestion of food is made possible even without conscious thought.

Pectoralis Major Muscle - Attachment, Action & Innervation. Pectoralis major is a thick, fan-shaped muscle contributing to the thoracobrachial motion. It consists of a clavicular part and a sternal part, both converging to a flat tendon that inserts on the humerus. It's innervated by both medial and lateral pectoral nerves.

The quadriceps muscles provide strength and power with knee extension (straightening). The hamstrings muscles allow for strength and power in flexion (bending). The patellar tendon on the front of the knee is part of the quadriceps mechanism. Other smaller muscles and tendons surround the knee joint as well. 1.
