InfoWorld is targeted to Senior IT professionals. Content is segmented into Channels and Topic Centers. InfoWorld also celebrates people, companies, and projects.

In an astonishingly short period of time, Finland has developed into one of the world's leading knowledge societies whilst retaining a comprehensive welfare state. The book traces this rapid transformation from a resource-based to a knowledge-based society. The authors describe the country's strengths and weaknesses in the new economy and demonstrate how Finland has been able to catch-up with the leading industrial countries by exploiting new techno-organizational opportunities. Experts from different fields provide rich empirical material on Finnish industries, firms, regions and institutions, and the role they have played in the transformation process. The book also details the business and economic restructuring which was required, and explores new trends in the country's science, technology and innovation policy.

The stunning mosaics that illustrate the story of Creation in the church of San Marco in Venice are the focus of Penny Howell Jolly's compelling and provocative book. Scholars of medieval art have long been interested in the Genesis mosaics because they copy a nearly destroyed fifth-century illuminated

Greek manuscript known as the Cotton Genesis. But instead of seeing the mosaics as a vehicle for reconstructing a lost cycle of paintings, Jolly presents them as a social document revealing the essential misogyny that existed in thirteenth-century Venice. Jolly analyzes more than twenty scenes, one by one in narrative order, and her perceptive reading goes well beyond what the Genesis Vulgate text says about Eve and Adam. The mosaics establish Eve as the culpable character from the very moment of her Creation, says Jolly, and depict her as dangerous and unrepentant at the end. Incorporating both feminist religious and narratological studies, Jolly poses important questions on the nature of visual language as opposed to verbal language. The very ability of visual forms to recall a rich variety of references is one source of their power, and propaganda must have enough breadth of reference to be read by diverse groups. The San Marco cupola, Jolly maintains, is dealing in powerful propaganda, and her pictorial observations offer an articulate and refreshing new view of this well-known work.

There is arguably no field in greater need of a comprehensive handbook than computer engineering. The unparalleled rate of technological advancement, the explosion of computer applications, and the now-in-progress migration to a wireless world have made it difficult for engineers to keep up with all the developments in specialties outside their own

The original Handbook of Surface and Interface Analysis: Methods for Problem-Solving was based on the authors' firm belief that characterization and analysis of surfaces should be conducted in the context of problem solving and not be based on the capabilities of any individual technique. Now, a decade later, trends in science and technology appear

OUR CULTURE HAS BECOME OBSESSED WITH HUSTLING. As we struggle to keep up in a knowledge economy that never sleeps, we arm ourselves with life hacks, to-do lists, and an inbox-zero mentality, grasping at anything that will help us work faster, push harder, and produce more. There's just one problem: most of these solutions are making things worse. Creativity isn't produced on an assembly line, and endless hustle is ruining our mental and physical health while subtracting from our creative performance. Productivity and Creativity are not compatible; we are stuck between them, and like the opposite poles of a magnet, they are tearing us apart. When we're told to sleep more, meditate, and slow down, we nod our heads in agreement, yet seem incapable of applying this advice in our own lives. Why do we act against our creative best interests? WE HAVE FORGOTTEN HOW TO FLOAT. The answer lies in our history, culture, and biology. Instead of focusing on how we work, we must understand why we work—why we believe that what we do determines who we are. *Hustle and Float* explores how our work culture creates contradictions between what we think we want and what we actually need, and points the way to a more humane, more sustainable, and, yes, more creative, way of working and living.

"MEMs Materials and Processes Handbook" is a comprehensive reference for researchers searching for new materials, properties of known materials, or specific processes available for MEMS fabrication. The content is separated into distinct sections on "Materials" and "Processes". The extensive "Material Selection Guide" and a "Material Database" guides the reader through the selection of appropriate materials for the required task at hand. The "Processes" section of the book is organized as a catalog of
