## Demystifying Drug Dosing in Obese Patients

Obese patients when dosed by TBW experience higher daptomycin exposure compared with their nonobese counterparts.<sup>73</sup> Given the relatively wide therapeutic index of daptomycin and clinical experience of tolerability as well as data supporting the use of higher daptomycin doses (up to 10 – 12 mg/kg) for adequate PK/PD target attainment, dosing obese patients with ABW 0.4 is reasonable to ensure treatment efficacy while balancing the risk of muscle toxicity. Close monitoring is

Comprehensive Guidance for Antibiotic Dosing in Obese ...

In theory, lipophilic drugs will readily diffuse into fat tissue, which would call for dosing based on total body weight for an obese person because their extra weight is largely fat. This is true for some drugs, such as diazepam, but not for others, including propofol and digoxin, which do not diffuse as extensively as expected [4] .
