With the current explosion in network traffic, and mounting pressure on operators' business case, Self-Organizing Networks (SON) play a crucial role. They are conceived to minimize human intervention in engineering processes and at the same time improve system performance to maximize Return-on-Investment (ROI) and secure customer loyalty. Written by leading experts in the planning and optimization of Multi-Technology and Multi-Vendor wireless networks, this book describes the architecture of Multi-Technology SON for GSM, UMTS and LTE, along with the enabling technologies for SON planning, optimization and healing. This is presented mainly from a technology point of view, but also covers some critical business aspects, such as the ROI of the proposed SON functionalities and Use Cases. Key features: Follows a truly Multi-Technology approach: covering not only LTE, but also GSM and UMTS, including architectural considerations of deploying SON in today's GSM and UMTS networks Features detailed discussions about the relevant trade-offs in each Use Case Includes field results of today's GSM and UMTS SON implementations in live networks Addresses the calculation of ROI for Multi-Technology SON, contributing to a more complete and strategic view of the SON paradigm This book will appeal to network planners, optimization engineers, technical/strategy managers with operators and R&D/system engineers at infrastructure and software vendors. It will also be a useful resource for postgraduate students and researchers in automated wireless network planning and optimization.

The People, Place, and Space Reader brings together the writings of scholars, designers, and activists from a variety of fields to make sense of the makings and meanings of the world we inhabit. They help us to understand the relationships between people and the environment at all scales, and to consider the active roles individuals, groups, and social structures play in creating the environments in which people live, work, and play. These readings highlight the ways in which space and place are produced through large- and small-scale social, political, and economic practices, and offer new ways to think about how people engage the environment in multiple and diverse ways. Providing an essential resource for students of urban studies, geography, sociology and many other areas, this book brings together important but, till now, widely dispersed writings across many inter-related disciplines. Introductions from the editors precede each section; introducing the texts, demonstrating their significance, and outlining the key issues surrounding the topic. A companion website, PeoplePlaceSpace.org, extends the work even further by providing an on-going series of additional reading lists that cover issues ranging from food security to foreclosure, psychiatric spaces to the environments of predator animals.
