The new 2015-2016 edition of Arkfeld's Best Practices Guide: ESI Pretrial Discovery -- Strategy and Tactics contains procedural steps, strategy and substantive law considerations related to the pretrial discovery of "electronically stored information" (ESI). These practices are intended to be used as general guidelines for the discovery and production of ESI. Depending on the unique issues of your case, these suggested practices may necessitate a different approach and should be considered on a case-by-case basis. Contents include: • Overview of Electronic Discovery and Information Technology • Preparing an Overall Plan and Strategy • ESI Issues and Strategy • Litigation Stages and Procedural Discovery Rules The eBook versions of this title feature links to Lexis Advance for further legal research options.

Contents include: Overview of Electronic Discovery and Information Technology Preparing an Overall Plan and Strategy ESI Issues and Strategy Litigation Stages and Procedural Discovery Rules

NEWLY REVISED March, 2012. This popular Guide contains strategy and tactics for handling sixteen specific ESI issues throughout pretrial discovery. These include scope of discovery, preservation obligation, controlling costs, search methodology, form of production, accessibility of ESI, sanctions, cost allocation, and much more. New with this guide is a "meet and confer" planning guide that will assist in reducing the ESI population and costs. Contents include: • The Basics of Electronic Discovery • Preparing an Overall Plan and Strategy • ESI Issues and Strategy - Sixteen Critical Issues • Litigation Stages and Procedural Discovery Rules This eBook features links to Lexis Advance for further legal research options.

Succeed on the job--and in your course--and prepare for the Certified Paralegal examination with the NALA Manual. More than 100 leading authorities with a wide range of experience in legal disciplines and management have contributed to this comprehensive manual since it was introduced in 1976. Covering all the skills required of paralegals today, the updated manual includes a collection of successful solutions to actual assignments accomplished by working paralegals nationwide. These proven techniques and procedures can be used as starting points from which you can make changes, adaptations, and modifications when you encounter similar situations on the job. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

The identification and quantification of material present and collected at a crime scene are critical requirements in investigative analyses. Forensic analysts use a variety of tools and techniques to achieve this, many of which use light. Light is not always the forensic analyst ' s friend however, as light can degrade samples and alter results. This book details the analysis of a range of molecular systems by light-based techniques relevant to forensic science, as well as the negative effects of light in the degradation of forensic evidence, such as the breakage of DNA linkages during DNA profiling. The introductory chapters explain how chemiluminescence and fluorescence can be used to visualise samples and the advantages and limitations of available technologies. They also discuss the limitations of our knowledge about how light could alter the physical nature of materials, for example by breaking DNA linkages during DNA profiling or by modifying molecular structures of polymers and illicit drugs. The book then explains how to detect, analyse and interpret evidence from materials such as illicit drugs, agents of bioterrorism, and textiles, using light-based techniques from microscopy to surface enhanced Raman spectroscopy. Edited by active photobiological and forensic scientists, this book will be of interest to students and researchers in the fields of photochemistry, photobiology, toxicology and forensic science.

Proceedings of the FISITA 2012 World Automotive Congress are selected from nearly 2,000 papers submitted to the 34th FISITA World Automotive Congress, which is held by Society of Automotive Engineers of China (SAE-China) and the International Federation of Automotive Engineering Societies (FISITA). This proceedings focus on solutions for sustainable mobility in all areas of passenger car, truck and bus transportation. Volume 7: Vehicle Design and Testing (I) focuses on: •Vehicle Performance Development •Vehicle Integration Platformed and Universal Design •Development of CAD /CAE/CAM and CF Methods in Automotive Practice •Advanced Chassis, Body Structure and Design •Automotive Ergonomic, Interior and Exterior Trim Design •Vehicle Style and Aerodynamic Design •New Materials and Structures Above all researchers, professional engineers and graduates in fields of automotive engineering, mechanical engineering and electronic engineering will benefit from this book. SAE-China is a national academic organization composed of enterprises and professionals who focus on research, design and education in the fields of automotive and related industries. FISITA is the umbrella organization for the national automotive societies in 37 countries around the world. It was founded in Paris in 1948 with the purpose of bringing engineers from around the world together in a spirit of cooperation to share ideas and advance the technological development of the automobile.

Generally a laser (light amplification by stimulated emission of radiation) is defined as " a device which uses a quantummechanical effect, stimulated emission, to generate a coherent beamof light from a lasing medium of controlled purity, size, andshape " . Laser material processing represents a great number of methods, which are rapidly growing in current and different industrial applications as new alternatives to traditional manufacturing processes. Nowadays, the use of lasers in manufacturing is an emerging area with a wide variety of applications, for example, in electronics, molds and dies, and biomedical applications. The purpose of this book is to present a collection of examples illustrating the state of the art and research developments in manufacturing, covering laser rapid manufacturing, lasers in metal forming applications, laser forming of metal foams, mathematical modeling of laser drilling, thermal stress analysis, modeling and simulation of laser welding, and the use of lasers in surface engineering. This book can be used as a research book for a final undergraduate engineering course or as a subject on lasers in manufacturing at the postgraduate level. Also, this book can serve as a useful reference for academics, laser researchers, mechanical manufacturing, materials or physics engineers, or professionals in any related modern manufacturing technology. Contents 1. Laser Rapid Manufacturing: Technology, Applications, Modeling and Future Prospects, Christ P. Paul, Pankaj Bhargava, Atul Kumar, Ayukt K. Pathak and Lalit M. Kukreja. 2. Lasers in Metal Forming Applications, Stephen A. Akinlabi, MukuShukla, Esther T. Akinlabi and Tshilidzi Marwala. 3. Laser Forming of Metal Foams, Fabrizio Quadri, Denise Bellisario, Erica A. Squeo and Loredana Santo. 4. Mathematical Modeling of Laser Drilling, Maturose Suchatawat and Mohammad Sheikh. 5. Laser Cutting a Small Diameter Hole: Thermal Stress Analysis, Bekir S. Yilbas, Syed S. Akhtar and Omer Keles. 6. Modeling and Simulation of Laser Welding, Karuppudaiyar R. Balasabramanian, Krishnasamy Sankaranarayanan and Gangusami N. Buvanashakaran. 7. Lasers in Surface Engineering, Alberto H. Garrido, Rubén González, Modesto Cadenas, Chin-Pei Wang and Farshid Sadeghi.
