The text is organized by topic—such as research in human factors, learning, thinking, and problem solving—and the authors discuss and clarify research methods in the context of actual research conducted in these specific areas. This unique feature helps students connect the concepts of sound methodology with their practical applications. Carefully selected real-world examples allow students to see for themselves the issues and problems that can occur in conducting research. More importantly, students develop a sense of how to anticipate and adjust for problems in their own research.
