ETOPS is an acronym for Extended Operations. The International Civil Aviation Organization coined the acronym for Extended Twin Operations for twin-engine aircraft operation further than one hour from a diversion airport at the one-engine inoperative cruise speed, over water or remote lands, on routes previously restricted to three- and four-engine aircraft. The ICAO issues Standards and Recommended Practices for ETOPS, and ETOPS were extended to four-engine aircraft like the Boeing 747-8 and th

ETOPS - Extended Range Twin Engine Operations - Understanding

The big limitation of twin jets up until recently has been that jet engines haven't been powerful enough, and aircraft control systems haven't been capable enough, to let aircraft like these fly for extended distances on a single engine - so if an engine failed in flight, twin engine aircraft had both very limited range and became very unstable due to the highly unbalanced thrust produced by wing-mounted twin engines.
