The CDU-led bloc focuses on promoting growth in the private ... must be given the capability for fiscal policy action and develop towards a genuine fiscal, economic and social union.

This book explores one way in which a tax system might help promote competitiveness and sustainable development. Focusing on the UK corporation tax, it recommends the introduction of a Resource Productivity Tax Credit, where resource productivity is defined as the money value of outputs relative to the money value of material resource and non-renewable energy inputs. The book is structured such that it first explores the legal mandate to promote competitiveness and sustainable development as contained in article 3(3) of the Treaty of the European Union. It then explores what competitiveness and sustainable development actually mean, particularly in an EU policy context, through the lenses of Europe 2020 and the EU Sustainable Development Strategy. It concludes that not only is there a great deal of common ground between competitiveness and sustainable development, as objectives, but that increasing resource productivity is a necessary means to those shared ends.

Studies in Macroeconomic Theory, Volume 2: Redistribution and Growth is a compendium of scholarly papers on the behavior and public control of distribution and growth in the market economy. The papers in this volume focus on the subject of public finance under the broad theory of economic policy. The papers are grouped into five groups or sections. Part I covers the steady-state choices. The second part takes up the efficient use of a given volume of saving in the choice among national investments. Part III explores the alternative approaches to optimal national saving. Part IV discusses the maximin-optimal graduated taxation of wage income. The final section expounds on Rawls's vision of the just economy. Economists will find the text invaluable and insightful.
