The classification of materials is based on the atomic structures and on the nature of bonds:

metals and their alloys (metallic bonding),
organic polymers (covalent bonding and secondary bonding), and
ceramics (ionic bonding and covalent bonding).

The chapter describes that the ceramic

Materials science and engineering is a multidisciplinary activity that has emerged in recognizable form only during the past two decades.

Practitioners in the field develop and work with materials that are used to make things—products like machines, devices, and structures.
