Endoscopic third ventriculostomy is the most widely performed neuroendoscopic procedure around the world. Several scientific papers appear in the scientific literature every month, with an increasing number, given the great interest neuroendoscopy has aroused as well as controversies about certain aspects of endoscopic third ventriculostomy. With this reasoning, the goal of this book is to be a reference in the revision of classic concepts and scientifically proven aspects about the indications and techniques of endoscopic third ventriculostomy, as well as new neuroendoscopic tendencies. The book is structured in 2 parts and into 7 chapters. Part I - Classic Concepts - comprises the first 2 chapters, covering general aspects of neuroendoscopy such as historical notes, endoscopic anatomy and ventricular system physiology. Part II - State-of-the-Art - comprises chapters 3 to 7. From chapters 3 to 6 the book will discuss general principles of endoscopic ventricular technique and the applications of endoscopic third ventriculostomy in different age groups, and its association to choroid plexus coagulation. Chapter 7 deals with alternative ways of communicating the ventricular system with the cisterns of the subarachnoid space. All chapters are richly illustrated with high resolution images; there are links to online access to demonstrative surgical videos. Designed for neurosurgeons at every level, the book will be unique in the market, as there is no similar book in the current scientific literature that specifically discusses endoscopic third ventriculostomy in its broadest sense.

Coeliac disease may be manifested with gastrointestinal symptoms, or be latent. It may also be present with dermatitis herpetiformis, dental enamel defects or neurological disorders - especially epilepsy. In the case of the latter symptoms, these appear mostly in relation to occipital seizures, frequently intractable. This book examines these and other neurological manifestations.

Written from the viewpoint of the practicing clinician, this text is an indispensable addition to the library of anyone who is in the practice of medicine, osteopathy, or chiropractic, as well as for the judge, lawyer, or social worker who may interact with those presenting with the possibility of malingering. Other topics discussed include Waddell's Signs, the Pinocchio Phenomenon, the Othello Error, the Menace Reflex, the Reliable Digit Span, Lombard's Test, the Babinski Sign of the Eyebrow, the Hummel Double Conversation Test, the Swinging Story Test, the Judd-Persaud Test, the Teal Test, the Chimani-Moos Test, the Occlusion Effect, the Drop Arm Test, the Drop Leg Test, the Honest Palm Sign, the Elbow-Flex-Ex Sign, Beevor's Sign, Schober's Test, the Babinski Trunk-Thigh Test, and the Barré Test. Advance praise for Neurological Malingering "Dr. Hirsch's book is long overdue and covers a critical topic of concern to all medical practitioners. This comprehensive treatise is a must for all physicians, psychologists, and others who work with patients who have incentive to gain from the system. Multiple topics related to malingering are presented in 16 straightforward chapters never before compiled in a single volume. I recommend this book highly to anyone concerned about malingering and its impact on the medical system." - Richard L. Doty, PhD, FAAM, Professor and Director, Smell and Taste Center, Perelman School of Medicine, University of Pennsylvania "Malingering affects not only the malingerers, but the persons and institutions around them as well. As a lay person, the readings have certainly made me considerably more sensitive to suspect behavior. And where knowledge of the underlying condition can affect relationships or transactions one is associated with, it is certainly useful to not only recognize its existence, but also to put it within the context of the challenges that it presents to those relationships or transactions. I count the time spent reading this most comprehensive work as well spent. I would further recommend it to others whose interests, decisions and/or professional pursuits could very well be affected by malingering, whether the behavior is or is not purposeful." - Judge Stephen A. Schiller (Retired), Circuit Court of Cook County, Illinois
