Macmillan Science 3 Teachers Guide - amsterdam2018.pvda.nl

Macmillan Science is a six-level Primary Science course designed to meet the needs of international learners. The course bridges the gap between mainstream curriculum learning and CLIL or English medium learning. Each level promotes a modern pupil-centred approach to science learning with clearly structured lessons and carefully graded activities.

Designed for 6-12 year olds, this title follows best practice in science education and is written by leading authors of primary science resources in the UK. Through stimulating content and carefully graded activities and exercises, it guides pupils to develop a sound framework of scientific knowledge and understanding.

Every lesson in Macmillan English 3 has two pages of resources in the Teacher's Guide to assist the teacher. The first page shows the pupils' material in facsimile and the brief notes on each step of the lesson related by pointers to the facsimile. This allows teachers to conduct the lesson with the stimulus material and main teaching points together. The second page contains the lesson summary, including the aim, specific targets, key words and language, materials needed and advance preparation required. It also contains a chart showing the proportion of time recommended for each lesson section, a warm-up to begin the lesson, detailed notes for aspects of each lesson which teachers may wish to use, tapescripts for listening activities and extension activities.

Through stimulating content and carefully graded activities and exercises, it guides pupils to develop a sound framework of scientific knowledge and understanding.

Includes Part 1, Number 1: Books and Pamphlets, Including Serials and Contributions to Periodicals (January - June)

Building on the foundation set in Volume I—a landmark synthesis of research in the field—Volume II is a comprehensive, state-of-the-art new volume highlighting new and emerging research perspectives. The contributors, all experts in their research areas, represent the international and gender diversity in the science education research community. The volume is organized around six themes: theory and methods of science education research; science learning; culture, gender, and society and science learning; science teaching; curriculum and assessment in science; science teacher education. Each chapter presents an integrative review of the research on the topic it addresses—pulling together the existing research, working to understand the historical trends and patterns in that body of scholarship, describing how the issue is conceptualized within the literature, how methods and theories have shaped the outcomes of the research, and where the strengths, weaknesses, and gaps are in the literature. Providing guidance to science education faculty and graduate students and leading to new insights and directions for future research, the Handbook of Research on Science Education, Volume II is an essential resource for the entire science education community.
