The education and training of Marine Corps Combat Engineer Officers must keep pace with the changing requirements of the modern battlefield. The process should be adaptive to meet the needs of the individual officers. Curriculum planners must know these needs to effectively plan programs of instruction. The primary purpose of this thesis was to identify the education and training needs of these officers. Each course of training was reviewed, and curricula were examined. Previous task analyses conducted by the U.S. Army, Air Force, and Marine Corps were also reviewed. Questionnaires were sent to every Marine Corps officer with a primary or secondary engineer officer occupational specialty. Data collected and reported includes demographic information and perceptions of the relative importance of a training adequacy for combat engineer tasks, the program of instruction at The Basic School, and the program of instruction at the Marine Corps Engineer School. These findings will be useful to curriculum planners at every level of the education and training process for any occupational specialty. Education specialists are provided the perceived training needs of every company grade Marine Corps Combat Engineer Officer.

Combat engineers are a force multiplier when employed with front line units and increase the combat power of the ground commander. The proper employment of combat engineers also enhances the maneuver capability during offensive or defensive combat operations. This essay examines the role of the combat engineer in support of Marine Air Ground Task Forces. (Author).

The Land Management System (LMS) is an initiative of the U.S. Army Corps of Engineers (USACE) Engineer Research and Development Center (ERDC) focused on improving landscape analysis and landscape management capabilities in several of the Corps of Engineers major mission areas. The purpose of LMS is to provide relevant science, tools, and information to land and water resource managers and decisionmakers with the goal of enhancing their ability to understand and communicate past, current, and potential impacts of management actions on land and water resources. In 1999, the Marine Corps Air Ground Combat Center (MCAGCC) at Twentynine Palms, CA, was officially designated as a field application site. Field Application Site In-Progress Reviews (IPRs) are designed to ensure that the stages of evaluation, modification, and documentation are fulfilled. The first IPR workshop was held 13 April 2000. The objectives of this IPR were to provide a forum where personnel involved with specific MCAGCC LMS projects could discuss the progress of each effort, identify the relationships between projects, and solicit input from potential users of the resulting products. Results of the IPR are documented in this report to ensure project improvements and adjustments occur and to assist with the next IPR.

Fuel cells are an environmentally clean, quiet, and a highly efficient method for generating electricity and heat from natural gas and other fuels. In fiscal year 1993 (FY93), the Engineer Research and Development Center, Construction Engineering Research Laboratory (ERDC-CERL) was assigned the mission of managing the DOD Fuel Cell Demonstration Program. Specific tasks included developing turnkey PAFC packages, devising site criteria, screening candidate DOD installation sites based on selection criteria, evaluating viable applications at each candidate site, coordinating fuel cell site designs, installation and acceptance of the PAFC power plants, and performance monitoring and reporting. CERL selected and evaluated 30 application sites, supervised the design and installation of fuel cells, actively monitored the operation and maintenance of fuel cells, and compiled lessons learned for feedback to fuel cell manufacturers. At the conclusion of the demonstration period, each of the demonstration fuel cell sites was given the choice to either have the fuel cell removed or to keep the fuel cell power plant. This report presents a detailed review of a 200 kW fuel cell installed at the Marine Corps Air Ground Combat Center (MCAGCC) Twentynine Palms and operated between June 1995 and May 2000.

This book is a thorough treatment of the evolution of the United States Marine Corps’s principal distinguishing insignia, and covers from 1804 through World War I. The large inventory offers an objective basis for the identification, classification, and dating of over 300 emblems. The reader will find answers to questions about individual emblems such as: What is it, and what was its function? What is most significant, including its historical context? When was it used and discontinued, and if possible to answer, who manufactured it? Also included are answers to the most important question: What are the sources supporting these interpretations? A comprehensive guide is needed for the identification of US Marine Corps emblems, especially considering the serious proliferation of fakes and reproductions. This is a valuable tool for one of the fastest growing military collectibles in the world
