Injuries, accidents and wounds | Topic | NICE

This document summarises the evidence base on wound care products. It is a key therapeutic topic that has been identified to support medicines optimisation. It is not formal NICE guidance. This key therapeutic topic was updated in September 2019.

Overview | Wound care products | Advice | NICE

Appropriate wound and dressing care promotes healing and reduces the risk of infection. Providing information and advice on this to people having surgery and their carers will reduce the risk of them doing something to the wound or dressing that might contaminate the site with microorganisms unnecessarily. If a person develops a surgical site infection, early treatment is essential to prevent the infection getting worse.

Quality statement 5: Information and advice on wound care ...

This guideline covers when to offer caesarean section, procedural aspects of the operation and care after caesarean section. It aims to improve the consistency and quality of care for women who are considering a caesarean section or have had a caesarean section in the past and are now pregnant again.

New guidance from the National Institute for Health and Care Excellence (NICE) supports the case for adopting PICO Single Use Negative Pressure Wound Therapy System (sNPWT) as a treatment option for closed surgical incisions in high-risk patients. The guidance, including clinical evidence (i) and cost-analyses, highlights reductions in surgical site infection and seroma, compared to standard care 1.

NICE best practice guidelines for PICO | Smith+Nephew ...

Primary care management of a laceration involves: Cleaning, closing, and dressing wounds at low risk of infection. Infected wounds or wounds at high risk of infection should be cleaned and dressed initially; secondary closure can be considered after a few days, provided there are no signs of infection.
