PHP is a scripting language. To execute a PHP script, you need an interpreter that understands and runs the code.. When you open a PHP webpage online, the remote web server acts as PHP interpreter executing the PHP code and sending the output to your browser.. This is how a dynamic webpage is created ?. A development environment, or DE, is a software package that mimics a server environment ...

This program is extremely simple and you really did not need to use PHP to create a page like this. All it does is display: Hello World using the PHP echo statement. Note that the file does not need to be executable or special in any way. The server finds out that this file needs to be interpreted by PHP because you used the ".php" extension, which the server is configured to pass on to PHP.
