Science is not the only route to understanding nature. This volume presents a series of case studies in comparative epistemology, critically comparing the works of prominent representatives of the life sciences, such as Aristotle, Darwin, and Mendel, with the writings of literary masters, such as Andersen, Melville, Verne, and Ibsen. It constitutes a major contribution to the growing field of science and literature studies.

This scholarly and penetrating study of eugenics is a major contribution to our understanding of the complex relation between science, ideology and class.

Developing Global Health Programming: A Guidebook for Medical and Professional Schools, 2nd edition is an essential text for any academic institution, administrator, faculty, or student interested in developing or expanding global health education and international programs. This text expands on the 1st edition and provides a comprehensive view of global health education that is useful for medical, nursing, dental, public health, and other professional schools. This book provides evidence, theory, and practical information to guide astute program development and gold standard practices. Topics covered include ethics, pre-departure training, competencies, partnership structures, and much more. In addition, need-to-know resources and networking opportunities are detailed. This authoritative text has over 90 contributors, including trainee authors guided by faculty editors through a mentorship model. Foreword by Andre Jacques Neusy, Co-Founder & CEO, Training for Health Equity Network (THEnet)

The Oxford Dictionary of Medical Quotations is the one book that all doctors will want on their shelves. Packed with quotations both old and new, from the famous, and the not so famous, this book will be both a valuable reference work, and a source of considerable entertainment.

Whitebark pine is a dominant feature of western high-mountain regions, offering an important source of food and high-quality habitat for species ranging from Clark's nutcracker to the grizzly bear. But in the northwestern United States and southwestern Canada, much of the whitebark pine is disappearing. Why is a high-mountain species found in places rarely disturbed by humans in trouble? And what can be done about it. Whitebark Pine Communities addresses those questions, explaining how a combination of altered fire regimes and fungal infestation is leading to a rapid decline of this once abundant -- and ecologically vital -- species. Leading experts in the field explain what is known about whitebark pine communities and their ecological value, examine its precarious situation, and present the state of knowledge concerning restoration alternatives. The book. presents an overview of the ecology and status of whitebark pine communities offers a basic understanding of whitebark pine taxonomy, distribution, and ecology, including environmental tolerances, community disturbance processes, regeneration processes, species interactions, and genetic population structure identifies the threats to whitebark pine communities explains the need for management intervention surveys the extent of impact and losses to

dateMore importantly, the book clearly shows that the knowledge and management tools are available to restore whitebark pine communities both locally and on a significant scale regionally, and it provides specific information about what actions can and must be taken. Whitebark Pine Communities offers a detailed portrait of the ecology of whitebark pine communities and the current threats to them. It brings together leading experts to provide in-depth information on research needs, management approaches, and restoration activities, and will be essential reading for ecologists, land managers, and anyone concerned with the health of forest ecosystems in the western United States.

Virtual Worlds 2000 is the second in a series of international scientific conferences on virtual worlds held at the International Institute of Multimedia in Paris La Défense (Pôle Universitaire Léonard de Vinci). The term "virtual worlds" generally refers to virtual reality applications or experiences. We extend the use of these terms to describe experiments that deal with the idea of synthesizing digital worlds on computers. Thus, virtual worlds could be defined as the study of computer programs that implement digital worlds. Constructing such complex artificial worlds seems to be extremely difficult to do in any sort of complete and realistic manner. Such a new discipline must benefit from a large amount of work in various fields: virtual reality and advanced computer graphics, artificial life and evolutionary computation, simulation of physical systems, and more. Whereas virtual reality has largely concerned itself with the design of 3D immersive graphical spaces, and artificial life with the simulation of living organisms, the field of virtual worlds, is concerned with the synthesis of digital universes considered as wholes, with their own "physical" and "biological" laws.

'After reading this book it will be more difficult to "do" the sociology of work and the sociology of the body in the absence of the other. In some quite exquisite ways it throws down a challenge which practitioners in both fields will find difficult to ignore' - Paul Stewart, former editor of Work, Employment and Society, University of the West of England Bodies at Work provides the first full-length, accessible account of the body/work relation in contemporary western societies. Bringing together fields of sociology that have hitherto developed mainly along separate lines, the book demonstrates the relevance of concepts developed in the sociology of the body for enriching our understanding of changing patterns of work and employment. Bodies at Work begins by establishing key concerns in both the sociology of the body and the sociology of work. Drawing on existing research, the author proceeds to examine a wide range of employment sectors: industrial employment; customer relations; health practice; care work; the beauty industry; and sex work. The contribution of feminist theory and research is highlighted throughout, and analyses of photographs help the reader conceptualise the changing nature of the body/work relationship over time. Bodies at Work helps readers think more clearly and creatively about how work relations shape bodily experience.

Analysis of past developments in teacher education in Pakistan has shown that substantial progress has been made in this field. It has, however, been pointed out that education of science teachers still needs much improvement. At the present, there is an emergent need to meet the shortage of qualified science teachers and at the same time to bring qualitative improvements in the courses offered in teacher education institutions. First, we recommend that the 1-year duration of teacher preparation is grossly inadequate for all teaching courses, and should be lengthened, and the qualifications for entrance be increased. We believe that teaching must be made a graduate profession. For example, the basic qualification of primary school teachers for admission to teacher education institution should be increased. We recommend that PTC should be made a 12 + 2 year program. Similarly, CT, 12 + 3; B. Ed. , 14 + 2; B. S. Ed. , 12 + 4; M. A. Ed. , 14 + 3; and M. Ed. one year after B. Ed. or B. S. Ed. Secondly, we think the quality of instruction in teacher preparation programs should be improved. Most teachers in the teacher preparation institutions use the lecture method most of the time. Prospective teachers behave like passive listeners to their teachers. They do not participate in the teaching/ learning process. Some instructors even dictate their notes to the preservice teachers. When the teachers join schools, they behave the same way.
