This brief anthology for introductory sociology is a collection of 24 short readings that illustrate key concepts in sociology, relate to the everyday lives of students, and spark good classroom discussions. The selections represent four theoretical traditions in sociology (functionalism, symbolic interaction, conflict theory, feminism) and show the range and diversity of sociology and the people who practice it. The book is designed for instructors who want to expose students to some original scholarship in their first sociology course, but who do not want to adopt a comprehensive reader along with the core text they are using.

Drawing on sociological theories to assist understanding of how political power operates in the cultural sphere, *The Sociology of Architecture* frames the discipline as a field of symbolic and material conflict over social identities. This volume contests the notion of architecture as an apolitical endeavor and suggests that major architectural projects can act as tangible expressions of the ultimately contested nature of collective identities, thus shedding light on how those with power both legitimate and mark their position in the world.
