Clearly  $(S_n)_{n \geq 1}$  is an adapted stochastic process, and we can show it is a martingale. Indeed,  $E_n[S_{n+1} | S_n] = b_n(X_1, \dots, X_n)E_n[X_{n+1}] = 0$ . For any arbitrary function  $f$ ,  $E_n[f(S_{n+1})] = \frac{1}{2} [f(S_n + b_n(X_1, \dots, X_n)) + f(S_n - b_n(X_1, \dots, X_n))]$ .

# Online Library Solution Manual Introduction To

Introduction to Stochastic Modeling,  
Fourth Edition, bridges the gap between  
basic probability and an intermediate level  
course in stochastic processes. The  
objectives of the text are to introduce  
students to the standard concepts and  
methods of stochastic modeling, to  
illustrate the rich diversity of applications
